EDUCATION

Bachelor of Engineering (ECE)
PSG College of Technology,
Coimbatore
CGPA – 7.88

PRIMARY SKILLS:

- Data Engineering
- GenAI
- Cloud computing (AWS)
- Prompt Engineering

SECONDARY SKILLS:

- AI/ML (Basics)
- MLOps (Basics)

PROGRAMMING LANGUAGES:

- SQL
- Python
- Pyspark

CLOUD PLATFORMS & DATA SOLUTIONS:

- AWS
- Databricks
- Snowflake

PROFILE

Innovative Data/GenAI Engineer with 7 years of experience in AI and data engineering. Skilled in utilizing advanced tools to address complex business challenges. Passionate about learning and implementing the latest trends in AI and data technologies.

PROFESSIONAL EXPERIENCE

GenAI and Data Engineer –
EPAM Systems, Hyderabad
May 2025 – Present

- Developed an end-to-end GenAI chatbot application as a customer support assistant for call centre agents by leveraging Amazon Bedrock, Lambda (backend orchestration), DynamoDB (tool calling), Amazon Kendra (RAG), API Gateway, AWS Amplify (hosting frontend), and other AWS services for seamless integration and performance.
- Independently architected and implemented robust prompt engineering solutions for a GenAI-powered customer care support assistant chatbot, meticulously tailored to the telecommunications domain to deliver highly contextual, accurate, and dynamic responses for complex customer interactions.
- Leveraged agentic AI frameworks including Strands, LangGraph, and LangChain to architect intelligent workflows, and utilized evaluation frameworks such as RAGAS alongside MCP for advanced tool calling and performance assessment.
- Designed and developed ETL processes and a Data Lake for a churn prediction model in a telecommunications project, leveraging AWS Glue, S3, Athena, Step Functions, DynamoDB, and SageMaker for scalable data management and analytics.

Data Engineer –
Cognizant Technology solutions, Hyderabad
July 2021 – May 2025

- Built reusable data ingestion and data transformation script for Retail based project using Pyspark and python to derive KPI's from source files and have implemented optimization techniques such as AQE, Broadcast joins and cache to improve the performance of the jobs.
- Designed and built efficient and reliable data ETL pipelines leveraging Spark, AWR EMR. AWS S3 etc.
- Worked on Active Batch to orchestrate and automate complex data workflows
- Have knowledge on data modelling and creating interactive Dashboards to visualize retail KPIs like sales, product performance, customer trends, store performance using Power BI .

AWS CLOUD SERVICES:

- EMR
- Glue
- Redshift
- S3
- DynamoDB
- Step functions
- Lambda
- Bedrock
- Sagemaker

SUPPLEMENTARY TOOLS:

- Power BI
- Airflow
- MLflow
- Terraform
- CICD
- Kinesis
- Github Actions
- Docker
- AWS AI/ML services

PYTHON LIBRARIES & FRAMEWORKS:

- Pyspark
- Pandas
- Boto3
- Strands (Agentic AI)
- MCP
- Langgraph
- Scikit learn
- Tensorflow
- Ragas (GenAI Evaluation)
- MLflow (for GenAI)

LANGUAGES

English
Tamil
Telugu

PL SQL Developer –

Cognizant Technology solutions, Hyderabad

Jun 2019 – Jun 2021

- Enhanced insurance modules (commissions, fund exchange, riders, claims), streamlining business processes and reducing manual errors.
- Automated reporting and data transfer processes, improving reporting accuracy and timeliness for financial operations.

CERTIFICATIONS

- AWS certified Data Engineer Associate (DEA- C01)
- AWS certified Data Engineer Associate (MLA – C01)
- Databricks Certified Data Engineer Associate
- Databricks Certified Generative AI Engineer Associate
- Snowpro core certification
- Microsoft Certified: Azure Fundamentals (AZ-900)

PROJECTS

Customer 360 Analytics Solution: C360 is an analytics platform for a telecom client that consolidates customer, transaction, and product data. I built ETL pipelines to integrate multiple data sources, applied data quality rules, and developed a Gold layer dataset. This enabled SageMaker churn prediction and delivered actionable insights through Quicksight dashboards.

Customer Care QnA chatbot Assistant: This project aims to build an intelligent assistant for customer care agents, providing quick access to product details, solutions for telecom issues like network or internet problems, and customer information such as billing and plan details. It also identifies high-risk churn customers and suggests targeted actions to improve retention and customer satisfaction.

Nova Sonic Voicebot Solution: This project delivers a speech-to-speech voicebot assistant that autonomously handles telecom customer queries, provides key information, and assists with issue resolution. It automates outbound notifications for billing and network outages, and integrates a knowledge base and tools via the MCP server, enhanced by prompt engineering for better conversations.

Retail Data Analytics Platform : A comprehensive analytics solution was developed to process and transform large volumes of retail data using scalable ETL pipelines on AWS EMR. The resulting data was stored in Amazon Athena and Redshift, enabling data analysts to build business visualizations in Power BI and drive informed decisions.

Insurance Application for Annuity and Life Products : Built for the insurance sector, this application delivers individual annuity and life insurance offerings, managed through a PL/SQL admin system with modules covering Riders, Rate Exchange, Death Claims, Commissions, Annuitization, and other key functions.
